# Problem 31

**31.** If the continued product of three numbers in a G.P. is 216 and the sum of their products in paird is 156, find the numbers.

**Solution:** Let the terms be  $\frac{a}{r}$ , a and ar, where a be the first term and r be the common ratio of the G.P. Given product is 216, implies  $\frac{a}{r}$ , a.  $ar = a^3 = 216 \Rightarrow a = n6$  Sum of the products in pairs is 156. Hence,

$$\frac{a}{r} \cdot a + a \cdot ar + \frac{a}{r} ar = 156$$

$$\Rightarrow a^2 \left(\frac{1}{r} + r + 1\right) = 156$$

$$\Rightarrow 36 \left(\frac{1 + r^2 + r}{r}\right) = 156$$

$$\Rightarrow 3(1 + r + r^2) = 13r$$

$$\Rightarrow 3r^2 - 10r + 3 = 0$$

$$\Rightarrow r = \frac{1}{3}, 3$$

Thus, required numbers are 18, 6, 2 or 2, 6, 18.

32. If a, b, c, d are in G.P., show that  $(a+b)^2, (b+c)^2, (c+d)^2$  are in G.P.

**Solution:** Let a be the first term and r be the common ratio of the G.P., then we have

$$b = ar, c = ar^{2}, d = ar^{3}$$
$$(a + b)^{2} = a^{2}(1 + r)^{2}$$
$$(b + c)^{2} = a^{2}r^{2}(1 + r)^{2}$$
$$(c + d)^{2} = a^{2}r^{4}(a + r)^{2}$$

It is clear that  $(a+b)^2$ ,  $(b+c)^2$ ,  $(c+d)^2$  are in G.P. with a common ratio of  $r^2$ .

33. If a,b,c,d are in G.P., show that  $(a-b)^2,(b-c)^2,(c-d)^2$  are in G.P.

**Solution:** Let a be the first term and r be the common ratio of the G.P., then we have

$$b = ar, c = ar^{2}, d = ar^{3}$$
$$(a - b)^{2} = a^{2}(1 - r)^{2}$$
$$(b - c)^{2} = a^{2}r^{2}(1 - r)^{2}$$
$$(c - d)^{2} = a^{2}r^{4}(1 - r)^{2}$$

It is clear that  $(a-b)^2$ ,  $(b-c)^2$ ,  $(c-d)^2$  are in G.P. with a common ratio of  $r^2$ .

**34.** If a, b, c, d are in G.P., show that  $a^2 + b^2 + c^2$ , ab + bc + cd,  $b^2 + c^2 + d^2$  are in G.P.

**Solution:** Let a be the first term and r be the common ratio of the G.P., then we have

$$b = ar, c = ar^{2}, d = ar^{3}$$

$$a^{2} + b^{2} + c^{2} = a^{2}(1 + r^{r} + r^{4})$$

$$ab + bc + cd = a^{2}r(1 + r^{2} + r^{4})$$

$$b^{2} + c^{2} + d^{2} = a^{2}r^{2}(1 + r^{2} + r^{4})$$

It is clear that  $a^2 + b^2 + c^2$ , ab + bc + cd,  $b^2 + c^2 + d^2$  are in G.P. with a comon ratio of r.

# Problem 35

**35.** If a, b, c, d are in G.P., show that  $\frac{1}{(a+b)^2}, \frac{1}{(b+c)^2}, \frac{1}{(c+d)^2}$  are in G.P.

**Solution:** Let a be the first term and r be the common ratio of the G.P., then we have

$$b = ar, c = ar^{2}, d = ar^{3}$$

$$\frac{1}{(a+b)^{2}} = \frac{1}{a^{2}(1+r)^{2}}$$

$$\frac{1}{(b+c)^{2}} = \frac{1}{a^{2}r^{2}(1+r)^{2}}$$

$$\frac{1}{(c+d)^{2}} = \frac{1}{a^{2}r^{4}(1+r)^{2}}$$

It is clear that  $\frac{1}{(a+b)^2}, \frac{1}{(b+c)^2}, \frac{1}{(c+d)^2}$  are in G.P. with a common ratio of  $\frac{1}{r^2}$ .

**36.** If a, b, c, d are in G.P., show that  $a(b - c)^3 = d(a - b)^3$ 

**Solution:** Let a be the first term and r be the common ratio of the G.P., then we have

$$b = ar, c = ar^{2}, d = ar^{3}$$
$$a(b-c)^{3} = a(ar - ar^{2})^{3} = a^{4}r^{3}(1-r)^{3}$$
$$d(a-b)^{3} = ar^{3}(a-ar)^{3} = a^{4}r^{3}(1-r)^{3}$$

Hence, we have proven the desired equality.

37. If a, b, c, d are in G.P., show that  $(a + b + c + d)^2 = (a + b)^2 + (c + d)^2 + 2(b + c)^2$ 

**Solution:** Let a be the first term and r be the common ratio of the G.P., then we have

$$b = ar, c = ar^{2}, d = ar^{3}$$

$$L.H.S. = (a + b + c + d)^{2} = (a + ar + ar^{2} + ar^{3})^{2}$$

$$= a^{2}(1 + 2r + 3r^{2} + 4r^{3} + 3r^{4} + 2r^{5} + r^{6})$$

$$R.H.S. = (a + b)^{2} + (b + c)^{2} + 2(b + c)^{2}$$

$$= a^{2}(1 + r^{2} + 2r) + a^{2}(r^{4} + 2r^{5} + r^{6}) + a^{2}(2r^{2} + 2r^{4} + 4r^{3})$$

$$= a^{2}(1 + 2r + 3r^{3} + 4r^{3} + 3r^{4} + 2r^{5} + r^{6})$$

It is evident that L.H.S = R.H.S.

**38.** If a,b,c are in G.P., show that  $a^2b^2c^2\left(\frac{1}{a^3}+\frac{1}{b^3}+\frac{1}{c^3}\right)=a^3+b^3+c^3$ 

**Solution:** Let a be the first term and r be the common ratio of the G.P., then we have

$$b = ar, c = ar^{2}$$

$$L.H.S. = a^{2}b^{2}c^{2}\left(\frac{1}{a^{3}} + \frac{1}{b^{3}} + \frac{1}{c^{3}}\right)$$

$$= \frac{b^{2}c^{2}}{a} + \frac{a^{2}c^{2}}{b} + \frac{a^{2}b^{2}}{c}$$

$$= a^{3}r^{6} + a^{3}r^{3} + a^{3} = c^{3} + b^{3} = a^{3}$$

**39.** If a, b, c are in G.P., show that  $(a^2 - b^2)(b^2 + c^2) = (b^2 - c^2)(a^2 + b^2)$ 

**Solution:** Let a be the first term and r be the common ratio of the G.P., then we have

$$b = ar, c = ar^{2}$$
L.H.S. =  $(a^{2} - b^{2})(b^{2} + c^{2}) = a^{2}(1 - r^{2})a^{2}r^{2}(1 + r^{2})$ 

$$= a^{2}r^{2}(1 - r^{2})a^{2}(1 + r^{2}) = (a^{2}r^{2} - a^{2}r^{4})(a^{2} + a^{2}r^{2})$$

$$= (b^{2} - c^{2})(a^{2} + b^{2})$$

# Problem 40

**40.** If a, b, c are in G.P., show that  $\log a, \log b, \log c$  are in A.P.

**Solution:** Let a be the first term and r be the common ratio of the G.P., then we have

$$b = ar, c = ar^2$$

$$\log a = \log a$$

$$\log b = \log ar = \log a + \log r$$

$$\log c = \log ar^2 = \log a + 2\log r$$

Clearly,  $\log a$ ,  $\log b$ ,  $\log c$  are in A.P. with a common difference of  $\log r$ .
